Projects

E-Commerce Data Transformation Pipeline

github.com/pahasara-ridmaka/dbt-e-commerce

- Architected a modular ELT analytics warehouse with staging, intermediate, and dimensional mart layers (star schema) using dbt and DuckDB
- Implemented comprehensive data validation with dbt_expectations and reusable macros via dbt_utils
- Built an interactive Streamlit dashboard for real-time sales and customer behavior analytics backed by automated single command transformations

Automated End-to-End ETL Pipeline & Health Dashboard

github.com/pahasara-ridmaka/gov-dengue-etl

- Engineered a containerized ETL pipeline using Docker and Airflow, automating daily tabular extraction from unstructured health PDF reports with higher accuracy via pdfplumber
- Designed dual storage architecture with raw CSV archival and SQLAlchemy backed PostgreSQL storage
- Built real-time trend analytics dashboard with automated retry mechanisms and logging

HoldMyResume: Full-Stack Job Application Tracker

pridmaka.pythonanywhere.com

- Developed a full-stack web application using Django and Python to centralize application tracking, status workflows, and document management with role-based user authentication.
- Implemented dynamic, SPA-like slide-out views and responsive user interfaces using HTMX and custom CSS, eliminating full-page reloads and enhancing UX responsiveness.
- Built an analytics dashboard to visualize recruitment metrics, manage secure local/cloud document storage for resumes, and enable one-click CSV data exports.
