PROFESSIONAL SUMMARY

ICT and Mathematics graduate with hands-on experience building ETL pipelines and API-driven applications. Strong foundation in OOP, Data Structures and Algorithms, Software Architecture, Python, and SQL. Seeking a graduate internship or entry-level role in data engineering within a collaborative, production-focused team.

EDUCATION

University of Sri Jayewardenepura

B.Sc. in Physical Science ICT (ICT GPA: 3.34/4.00)

May 2026

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C

Frameworks: Django, Flask, Next.js, React, FastAPI, Streamlit, Apache Airflow

Databases: PostgreSQL, MySQL

Cloud & DevOps: AWS (Cloud Foundations, Data Engineering, ML Foundations), Docker

Tools: Git, GitHub, Linux, VS Code, REST APIs, JSON, XML, SQLAlchemy

PROJECTS

Automated End-to-End ETL Pipeline & Health Dashboard [Github]

July 2026

Python · Apache Airflow · PostgreSQL · Docker · Streamlit

- Engineered a containerized ETL pipeline using Docker and Apache Airflow to automate daily extraction, transformation, and loading of public health data from the Sri Lankan Ministry of Health.
- Developed robust PDF parsing scripts with pdfplumber to extract, clean, and structure tabular data from unstructured PDF reports, implementing error logging for immediate debugging.
- Designed a resilient dual-storage architecture archiving raw data in CSV files while utilizing SQLAlchemy ORM to load production-ready data into PostgreSQL.
- Built an interactive dashboard enabling real-time tracking of dengue trends, with plans to scale via Django.

London Airbnb Market Analytics & Predictive Modeling

March 2026

Python, Scikit-Learn, Pandas

- To extract actionable insights from a dataset of over 28,000 listings, the project followed an end-to-end KDD pipeline. This involved executing a data acquisition and preprocessing workflow to handle anomalies, missing values, and feature isolation, followed by unsupervised clustering algorithms and association rule mining to map out distinct market segments.
- Ultimately, this removes the guesswork from property pricing by providing a reliable model that accurately explains nightly price fluctuations. By uncovering clear, real-world traveler trends, it gives hosts the exact insights they need to set competitive rates, target the right customer tiers, and maximize their overall rental revenue.

Visit Panama Sri Lanka – Tourism Platform

April 2026

[React](#) · [TypeScript](#) · [FastAPI](#) · [PostgreSQL](#) · [Tailwind CSS](#)

- Architected a three-tier, API-driven full-stack application with an asynchronous ORM layer connecting to a relational database.
- Built a responsive user interface enabling travelers to explore and plan trips while allowing local homestay and safari operators to showcase their services.
- Integrated REST API endpoints connecting tourist-facing frontend with operator service listings, enabling seamless booking workflows.

ACHIEVEMENTS & CERTIFICATIONS

Finalist, HackX 9.0 – University of Kelaniya

Sep 2024

- Co-founded Team CODE9, securing Top 15 out of 220+ teams at the Dialog Axiata PLC finale.

Professional Certifications

- **AWS Academy:** Cloud Foundations, Data Engineering, Machine Learning Foundations (Jun 2026)
- **DataCamp:** Data Visualization in Power BI, Introduction to Power BI (Jun 2026)
- **PyData Sri Lanka:** Post-Conference Workshop Series (Jan 2025)

LEADERSHIP & VOLUNTEERING

Computer Science Association (CSA) - USJ

Sub-Editor & Graphic Designer

2025 – 2026

Career Skills Development Society (CSDS) - USJ

Faculty Coordinator

2024 – 2025
